

Rainwater harvesting facility at TRF colony

Jamshedpur: Former managing director of Tata Steel J J Irani inaugurated the rain water harvesting facility in the company's residential colony, TRF Nagar. Rainwater harvesting facility at TRF is first of its kind in the city to be set up in a residential colony.

The water harvested from rooftops and the run-off storm water in the colony will not be used for distribution or consumption by the residents but will be stored and re-charged for distribution to the residents of the adjoining Birsanagar which faces acute shortage of potable water.

The facility will also help to raise water table and quality of water in nearby areas.

Water is already being distributed to the residents of Birsanagar. TNN
